WATTLE RANGE COUNCIL GOES FOR QUALITY ROLLERS

Wattle Range Council in South Australia's South East has just taken delivery of three Broons BH-1830 Combination Rollers because of the Company's internationally recognized reputation for building a quality product.

Bruce Clayson, the Council's Workshop Supervisor, said they could have the "best of both worlds" with their Broons Combination Rollers that are mainly used behind graders for patrol grading throughout the Council area.

"Sometimes we want the steel drum and other times we want the tyres. With these Broons units we get the best of both worlds," Bruce said.

"We looked at other brands but Broons came out on top. It was mainly their quality that influenced us to buy their machines.

"We've had Broons equipment in the past, and we've always had a good run out of it. Everyone in Council knows what you're talking about when you say Broons.

"They build quality products, and although we looked at other brands, it goes without saying that you get what you pay for," Bruce concluded.

Wattle Range Council is the amalgamation of three council areas – Penola in the famous Coonawarra wine belt, Millicent in the "Green Triangle" forest region of the South East and Beachport on the Limestone Coast as a popular holiday and fishing destination.

Broons BH-1830 Combination Roller can be as flexible as the customer wants it to be – it can be a combination of Smooth Drum and Multi-Tyre (BH1830) like Wattle Range Council bought, Grid Roller and Multi-Tyre (BH1830GR), or just a Multi-Tyre Roller (BH1830M).

With a rolling width of 1830mm and an all-up weight of up to 14 tonnes the roller can be specified with a combination of tyres and drum type that best suits the individual needs of the customer. Owners can select a thicker roll drum, hydraulic clamping device on the drawbar or heavier tare weight and Broons will custom build each roller to suit its specific working conditions.

A Broons Combination Roller is easy to use and can readily change from tyres to steel roll drum and back. It's a simple operation that can be done from the ease of the operator's seat.

Broons experienced technical staff can give you details on hiring or buying a machine, and can be contacted on (08) 8268 1988.
