

BROONS

***eCombi* ROLLER**

An investment in road maintenance

Practical... Economical... Valuable... Broons eCombi Roller

eCombi ROLLER

Broons' revolutionary new eCombi Roller is ideal for patrol grading unsealed roads.

Fitted with a centrally mounted steel roll drum and rear row of nine smooth tread compactor tyres, the eCombi can be rapidly deployed to any location.

The eCombi can be ordered with either a static steel roll drum or can be optioned with a vibrating drum operated from the hydraulics of the towing unit. The rear wheel assembly is raised or lowered hydraulically to suit the application of the machine and we recommend solid filling the smooth tread compactor tyres to eliminate punctures. Each wheel is mounted on individual bearings (sealed for life) to eliminate scuffing of the freshly graded road surface when turning.

Broons' eCombi Roller is capable of rolling in both forward and reverse directions on either the tyres or the steel roll drum, water can be added to the drum to provide additional ballast if necessary.

Features of the Broons eCombi Roller include:

- Smooth drum and multi-tyre
- Optional vibrating drum
- Individual wheel bearings sealed for life
- Rolling width of 2.00m
- Weighs up to 8.0t when ballasted

Call now to arrange a trial of the Broons eCombi Roller
