BROONS HANDY HITCH GRADER-MOUNTED ROLLER IS WIDELY USED

Broons Handy Hitch grader-mounted roller has been widely accepted by Shire Councils from one end of Australia to the other as the ideal piece of equipment for patrol grading operations.

There are now machines working from Far North Queensland to the south west of Western Australia, and everywhere in between, and Shire personnel are impressed with the way it handles their work.

Adjoining Shires Plantagenet and Cranbrook, and nearby Nannup Shires in Western Australia all have machines and it seems to suit their material very well. The first machine in Australia was purchased by Narrabri, and they are still a happy and satisfied owner years later.

Broons have a demo machine available should anybody want to prove the benefits of this truly unique piece of equipment, and their experienced staff would be happy to explain its many benefits.

One Council Works Manager said: "The Handy Hitch attached to the back of a grader gives us two machines at the one time. It serves a dual purpose of grading and finishing in one pass and we only need one Operator on the equipment. We believe it saves us money."

Broons Director, Stuart Bowes, said: "The Broons Handy Hitch PP-2285 can be used in both forward and reverse direction and is easily raised or lowered on the run. There are two choices for attaching the Handy Hitch - either directly to the back of a grader or to the ripper attachment. Either way it's very easy."

Broons experienced technical can be contacted on (08) 8268 1988 or info@broons.com.
