### KIRPY HAS ENVIRONMENTAL SOLUTION TO SOLVE VINEYARD PROBLEM

The unique PTO driven Kirpy Rock Crusher marketed by international crushing and compaction specialists, Broons, is proving the ideal solution in treating vineyards' rough and rocky ground.

Luca Vineyards in Adelaide's famous Southern Vales is one vineyard that has hired the Kirpy recently to undertake rock crushing work at their McLaren Vale property.

Luca's Linc Rayner said that he had seen the Kirpy in action before, and believed it would be good for their vineyard.

"It did a wonderful job," Linc said.

"Certainly the ground is much easier to travel over now that the rock has been crushed. It is nowhere near as rough as it used to be.

"I know that I am certainly going to notice the difference in September when I am driving a tractor pulling a spray down the rows.

"It has really done the job we wanted," Linc concluded.

Broons are the Australasian distributors for the Kirpy range of Rock Crushing equipment made in France. Several models are available in Australia, ranging from the smaller BP series, through the BPS series up to the larger WX300. The correct machine for a particular job will be determined by the tractor power, type and size of rock, the type of soil and the width between the rows.

Luca Vineyards used the Kirpy BP135 because it was ideally matched for their tractor horsepower. The BP135 has a gross weight of 1340 kilograms, a working width of 1.35 metres, and is ideally matched with a tractor that has a minimum of 80 horsepower.

Broons experienced technical staff can give you advice on which would be the best machine for a particular application, and the details on hiring or buying a machine. They can be contacted on (08) 8268 1988.
