### KIRPY ROCK CRUSHERS PROVING PRODUCTIVE IN FLOOD-RAVAGED QUEENSLAND

The Kirpy range of rock crushers is proving productive in assisting Queensland Shire Councils with their road rehabilitation and repair following the flooding earlier this year.

Money for road rehabilitation is now filtering through to Shires and a number of Kirpy rock crushers are working in far western Queensland council areas helping to repair flood damaged roads.

The general comment from operators of these machines is that the hammer wear is down and that the productivity of the machines is very good.

For example, the Kirpy BPB250, with its twelve fixed and toughened carbide-tipped hammers, crushes rock up to 300mm in diameter into 40mm minus product at a rate up to 150m<sup>3</sup> an hour. Simply connected to a 120kW tractor with a constantly variable transmission (or creeper gear) through its three-point linkage means that the Kirpy is OH&S friendly and the operator can be crushing within a minute of arriving at the site.

Council Works Managers and operators that have used Kirpy rock crushers have been impressed by their durability, quality and simple dual poly V-belt drive. Sealed bearings and a hydraulically adjustable anvil featuring a hydro-pneumatic safety device, make these machines the best performers for their size in the Australian market.

Broons are the Australasian distributors for the Kirpy range of Rock Crushing equipment made in France. Three models of Kirpy machines, the BPB200, the BPB250 and the larger WX300, are all available for hire or purchase and are well suited to road construction, while other models are available for agricultural applications. Broons can be contacted on (08) 8268 1988, by e-mail at [info@broons.com](mailto:info@broons.com) or through their website [www.broons.com](http://www.broons.com).
